UV-C hard surface disinfection system now at CH thanks to Auxiliary

Thanks to the generosity of the CH Auxiliary, our Environment Services (ES) now utilizes the Surfacide® Helios Multiple Emitter UV-C Disinfection System for better room disinfection and desired effect in less time. The system features three towers, as illustrated here, that send rays around the room to clean all areas. Surfacide® provides an evidence-based, automatic UV-C room disinfection system that eliminates multi-drug resistant organisms including C.Diff, MRSA, VRE, CRE and Acinetobacter.

At CH the system will be used in the Surgery Center, ICU, isolation terminal patient rooms (including bathrooms), and possibly the Child Development Center.

Pictured here with the system are, from left: **Cleatus McConnell**, Auxiliary first vice president; **Sheryl McClary**, Auxiliary director; **Danielle Hunt**, ES; **Sharon Lairy**, ES; **Ellen Vosburgh**, Auxiliary president; **Valarie White**, second vice president; and **Scott Herbert**, ES director.
